

Bibliographie

Amarante, A. ; Lanoisellé, J.-L. 2005.

Heat transfer coefficients measurement in industrial freezing equipment by using heat flux sensors. *Journal of Food Engineering*, **66** : 377-386.

Bartlett, L. 1944.

A thermodynamic examination of latent heat of food. *Refrigeration Engineering*, **47** : 377-384.

Bazinet, L. ; Benoit, S. ; Pouliot, Y. ; Castaigne, F. 2018.

Opérations unitaires et notions de génie industriel laitier appliquées. *In Science et technologie du lait*, 3^e édition. Fondation de technologie laitière du Québec, Presses de l'Université Laval, Québec, Canada. Chapitre 2, p. 37-154.

Becker, B.R. ; Fricke, B.A. 2004.

Heat transfer coefficients for forced-air cooling and freezing of selected foods. *International Journal of Refrigeration*, **27** : 540-551.

Bimbenet, J.J. ; Duquenoy, A. ; Trystram, G. 2007.

Génie des procédés Alimentaires : Des bases aux applications. 2^e édition, Dunod, Paris, France, 592 pages.

Chen, C., 1985.

Thermodynamic analysis of freezing and thawing of foods: enthalpy and apparent specific heat, *Journal of Food Science*, **50** : 1158-1162.

Chen, C., 1985.

Thermodynamic analysis of freezing and thawing of foods: ice content and Mollier diagram, *Journal of Food Science*, **50** : 1163-1166.

Ede, A.J. 1949.

The calculation of the freezing and thawing of foodstuffs. *Modern Refrigeration*, **52** : 52-58.

Fellows, P.J. 2009.

Food processing technology - Principles and practice. 3rd edition, Woodhead Publishing Limited, CRC Press, Cambridge, Angleterre, 928 pages.

- Ibarz, A. ; Barbosa-Canovas, G.V. 2003.
Unit Operations in food engineering. Food preservation Technology Series.
CRC Press, Taylor and Francis Group, Boca Raton (FL), 889 pages.
- Jeanet, R. ; Croguennec, T. ; Schuck, P. ; Brulé, G. 2006.
Sciences des aliments : Biochimie – Microbiologie – Procédés – Produits.
Vol. 1, Stabilisation biologique et physico-chimique. Éditions Tec & Doc
Lavoisier, Paris, France, 383 pages.
- Joshi, C. ; Tao, L.C. 1974.
A numerical method of simulating the axisymmetrical freezing of food
systems. *Journal of Food Science*, **39** : 623-627.
- Kessler, H.G. 2002.
Food and bio process engineering–dairy technology. 5^e édition, Vertag A.
Kessler, Munich, Allemagne, 694 pages.
- Kondjoyan, A. 2006.
A review on surface heat and mass transfer coefficients during air chilling
and storage of food products. *International Journal of Refrigeration*, **29** :
863-875.
- Lacroix, C. ; Castaigne, F., 1987a.
Simple method for freezing time calculations for infinite flat slabs, infinite
cylinders and spheres, *Canadian Institute of Food Science and Technology
Journal*, **20** : 252-259.
- Lacroix, C. ; Castaigne, F., 1987b.
Simple method for freezing time calculations for brick and cylindrical
shaped food products, *Canadian Institute of Food Science and Technology
Journal*, **20** : 342-349.
- Mott, L.F. 1964.
The prediction of product freezing time. *Australian Refrigeration and Air
Conditioning Heat*, **18** : 16-25.
- Plank, R., 1913.
Die Gefrierdauer von eisen Blocken. *Zeitschrift für die gesarute kalte-
industrie*, **20** : 109-114.

- Pham, Q.T. 1986.
Simplified equation for predicting the freezing time of foodstuffs. *Journal of Food Technology*, **21** : 209-219.
- Pham, Q.T. 1996.
Prediction of calorimetric properties and freezing time of foods from composition data. *Journal of Food Engineering*, **30** : 95-107.
- Pham, Q.T. 2006.
Modelling heat and mass transfer in frozen foods : a review. *International Journal of Refrigeration*, **29** : 876-888.
- Schwartzberg, H.G. ; Roseman, J.R. ; Haight, J.R. 1977.
The prediction of freezing and thawing temperature vs time behavior through the use of effective heat capacity equations. *In* Congélation, conservation à l'état congelé et lyophilisation. *Bulletin International du Froid*. Annexe 1977-1, p. 311-317.
- Singh, R.P. ; Heldman, D.R. 2014.
Introduction to Food Engineering, 5th edition, Academic press, Elsevier, Amsterdam, Netherland, 892 pages.
